Technology and Applications of Brain-Computer Interfaces

Message from the Guest Editors

The aim of the Special Issue is to host recent research advances in the field of technology and applications of brain-computer interfaces and to highlight research issues and still open questions. Potential topics include computational methodologies (but are not limited to):

- Applied and Computational Mathematics;
- Computational Intelligence;
- Machine Learning;
- Data mining;

when applied to:

- Medical data;
- Smart environment;
- Educational;
- Games and entertainment;
- Security and authentication;
- Neuromarketing.

Furthermore, software tools designed for addressing any of the above topics might also be considered for the SI.

- applied and computational mathematics (e.g., filtering, pre-processing);
- computational intelligence (e.g., fuzzy logic, deep neural networks, evolutionary computation, probabilistic methods);
- machine learning (e.g., support vector machine, Boltzmann machine);
- data mining (e.g., feature extraction, clustering)
