Special Issue

CO₂ Emission in Geothermal Systems and Resources

Message from the Guest Editors

Geothermal energy provides a valid contribution to the mitigation of climate change because greenhouse gases, in particular CO2, are not produced in the electricity and thermal energy generation cycles; geothermal energy is considered CO2-free in respect to fossil fuels. The natural degassing of CO2 from the Earth is a known and partially quantified phenomenon in volcanic and non-volcanic areas. Several papers evidence the occurrence of huge natural emission of CO2 in geothermal areas. The Special Issue is devoted to increasing our knowledge of the natural phenomenon of Earth degassing due to thermal and geodynamic processes occurring at depth in the Earth, further highlighting relations between natural gas emissions and emissions driven in power plants and their reciprocal influence in respect to the total budget of CO2 emissions in atmospheric in geothermal systems. This Special Issue is also open to contributions exploring geothermal areas through mapping of CO2 natural flux and as a tool for fault and fracture tracing.

About the Journal

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Editor-in-Chief

Prof. Dr. Enrico Sciubba

Department of Mechanical and Aerospace Engineering, University of Roma Sapienza, Via Eudossiana 18, 00184 Roma, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Control and Optimization)
