Advance in CO₂ Capture Technology

Message from the Guest Editor

The need for climate change mitigation measures continues to grow. Efforts are increasing worldwide to move away from fossil fuels and move towards renewable energy. New technologies are being invented, and existing technologies are being improved to make them economically viable and environmentally acceptable. In order to meet the targets of greenhouse emissions reduction and to keep the global temperature rise below 2 °C, all the available technologies have to play their role. Carbon capture is gaining increased interest as a technology to reduce greenhouse gas emissions from the power and industrial sectors. Without carbon capture with utilisation, the storage costs of decarbonisation will increase significantly. Carbon capture is a broad subject involving a number of technologies at different levels of development that have their own pros and cons.

About the Journal

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Editor-in-Chief

Prof. Dr. Enrico Sciubba

Department of Mechanical and Aerospace Engineering, University of Roma Sapienza, Via Eudossiana 18, 00184 Roma, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Control and Optimization)
