

## Special Issue

# Electromagnetic Modeling in Power Electronics

### Message from the Guest Editors

EM effects can play a major role in the operation of PE devices and systems. They can either be the main underlying operational mechanism, or may need to be mitigated in order to allow operation free from EM interference and noise. In either case, there is a substantial benefit in having accurate and efficient EM methods and techniques to model these effects. This allows the performance of devices and systems to be predicted, evaluated, and optimized by simulations in an early design stage prior to prototyping, thereby reducing cost and minimizing subsequent redesigns.

- Numerical techniques for EM modeling of PE components and systems (PEEC, FEM, MoM);
- Behavioral modeling and EM characterization of PE components and systems (vector fitting, neural networks, reduced order models, SPICE equivalent circuits);
- EM modeling of wireless power transfer (WPT);
- Electro-hydrodynamic (EHD) modeling;
- EMI/EMC modeling and characterization of PE converters and drives;
- Passive and active EMI filters for PE converters;
- Radiated and conducted noise emissions of PE systems;
- EMI modeling for smart grids.

## About the Journal

### Message from the Editor-in-Chief

*Energies* is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

### Editor-in-Chief

Prof. Dr. Enrico Sciubba

Department of Mechanical and Aerospace Engineering, University of Roma Sapienza, Via Eudossiana 18, 00184 Roma, Italy

---

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Control and Optimization)
