

Special Issue

Energy Consumption in EU Countries

Message from the Guest Editors

Energy is a basic good necessary to fulfill the demand for electricity used in heating systems, cooling systems, and others. Particular attention is paid to renewable energy sources, which provide clean energy. The use of traditional fossil fuels is rising because of the increasing demand for energy. Moreover, GHG emissions and other emissions created by heating gases threaten the environment and have caused a worldwide increase in temperature, have polluted water resources and decreased food security. The only way to solve the problem of reducing GHG emissions is through the production and consumption of clean energy. These are the possible topics of this Special Issue; however, we encourage authors to send other related works for possible publication. The topic can be extended for other works contributing to energy consumption in general.

About the Journal

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Editor-in-Chief

Prof. Dr. Enrico Sciubba

Department of Mechanical and Aerospace Engineering, University of Roma Sapienza, Via Eudossiana 18, 00184 Roma, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Control and Optimization)
