

## Special Issue

# Energy Price Shocks – Economic Impacts

### Message from the Guest Editors

Climate change is currently one of the main social issues being faced by all countries in the world. The United Nations have set a goal to reduce greenhouse gas emissions to net 0 by 2050. One of the methods that will facilitate the achievement of this target is the use of renewable energy resources; a growing number of research studies have been devoted to investigating this issue. As well as paying attention to specific energy resources, society should also focus on additional efforts that aid in optimizing the use of energy resources; in other words, the ways in which energy resources can be used in an efficient manner should be a major focus of academic researchers, as well as government regulatory authorities. Besides climate change, another issue in the energy sector is the fact that the prices of different energy resources, such as gas, coal, and electricity, have recently risen to their highest levels in decades, together with the fact that the majority of the countries in the world are still suffering from the negative impact of coronavirus, and economies are still attempting to navigate a way out of the recession.

## About the Journal

### Message from the Editor-in-Chief

*Energies* is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Control and Optimization)
