Special Issue

Power and Signal Transmission Lines Modeling and Large Network Analysis

Message from the Guest Editors

The analysis and modeling of power and telecommunication transmission lines represent an evergreen and hot topic in the scientific community. The transients originated by switching operations or external fields call for improvements in the models and analysis methods in order to obtain accurate results in computational times quickly enough that stochastic investigations can be afforded in reasonable times, even in the presence of large networks. This Special Issue will deal with novel models and/or methods for power and telecommunications transmission lines.

About the Journal

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Editor-in-Chief

Prof. Dr. Enrico Sciubba
Department of Mechanical and Aerospace Engineering, University of Roma Sapienza, Via Eudossiana 18, 00184 Roma, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Control and Optimization)
