

Special Issue

Energy Saving Technology in Building

Message from the Guest Editors

With the increase in population and enhancement of welfare systems, the demand for energy is rapidly increasing, exacerbating the energy source crisis and threatening our environment. According to IEA statistics, energy consumption in buildings accounts for around 40% of the total energy use. The majority of energy is consumed in heating and cooling systems in buildings. Thus, reducing building energy consumption plays a very important role in controlling global energy demand. The most effective way to reduce energy use in buildings is to study and develop high-efficiency energy systems by modifying existing energy systems, adopting new energy sources, and applying intelligent management methodologies. Recently developed technologies can provide new insights into building energy-saving methods, including the modification of existing energy use, building-integrated renewable energy, passive designs for zero-energy buildings, energy storage, advanced designs of building service equipment, and intelligent energy management. The objective of this Special Issue is to present the latest, cutting-edge research on high-energy-efficiency technologies in residential buildings.

About the Journal

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Editor-in-Chief

Prof. Dr. Enrico Sciubba

Department of Mechanical and Aerospace Engineering, University of Roma Sapienza, Via Eudossiana 18, 00184 Roma, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Control and Optimization)
