

## Special Issue

# Power Quality: Monitoring, Mitigation, and New Types of Disturbances

### Message from the Guest Editor

The term “power quality” is like with earlier revivals, new issues have come to the forefront. The two most important developments that have an impact on power quality are:

- The transition to a sustainable energy system, where one should not just think of wind power and electric vehicles, but also of more energy-efficient equipment. New types of equipment connected to the electricity grid affect the classical disturbances like harmonics and voltage variations. Such equipment also has shown to introduce new types of disturbances, which remain poorly understood, and some of which may not even have been discovered.
- The possibility of obtaining huge amounts of power-quality data, which calls for methods to extract, automatically and effectively, information from this data. Data-processing power and tools are available, but finding the right tool for the right application remains a big challenge.

We are calling for original contributions that cover the power-quality consequences for one or both of these developments. This includes problem descriptions, new algorithms, measurements and simulations, practical case studies, and mitigation methods.

---

### Guest Editor

Dr. Aurora Gil-de-Castro

Department of Electronic and Computer Engineering, University of Córdoba, Campus de Rabanales, Edificio Leonardo Da Vinci, E-14071 Córdoba, Spain

## About the Journal

### Message from the Editor-in-Chief

*Energies* is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

### Editor-in-Chief

Prof. Dr. Enrico Sciubba

Department of Mechanical and Aerospace Engineering, University of Roma Sapienza, Via Eudossiana 18, 00184 Roma, Italy

---

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Control and Optimization)
