

Special Issue

Innovative Reduction Processes for Environmental Applications

Message from the Guest Editor

Nowadays, reduction processes are used in different fields, from the synthesis of chemicals to the environmental and catalytic sciences, where they are widely used to reduce or at least minimize the concentration of the pollutants in water, air and soil. This Special Issue aims to collect the recent progress in innovative reduction processes for contaminant removal and nanomaterial synthesis. Articles on catalytic ammonia synthesis and carbon dioxide reduction, nanostructure synthesis by plasma treatment, and advanced reduction processes for environmental applications are also welcomed. Descriptions of experimental and theoretical studies, including in original research articles, reviews, communications and perspectives, are invited for submissions.

Guest Editor

Prof. Dr. Stanisław Waclawek

Department of Nanomaterials in Natural Sciences, Institute for Nanomaterials, Advanced Technology and Innovation, Technical University of Liberec, Studentska 1402/2, Liberec, Czech Republic

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within ESCI (Web of Science), Scopus, EBSCO and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 28.3 days after submission; acceptance to publication is undertaken in 3.6 days (median values for papers published in this journal in the first half of 2024).
