Special Issue

Information Theory in Control Systems, 2nd Edition

Message from the Guest Editor

The aim of this Special Issue on “Information Theory in Control Systems” is to present new theoretical developments and potential applications bridging the areas of control, communications, and information theory. Topics of the issue include, without being restricted to, the following:

- Networked control systems under communication constraints;
- Estimation and filtering theory for multisensor systems;
- Sampled-data control for networked control systems;
- Stochastic optimal control with randomized control strategies;
- Entropy-based approaches in optimal control;
- Feedback control, state-estimation, and consensus problems for multiagent systems;
- Entropy methods in estimation problems;
- Fault-tolerant control design for networked control systems with communication constraints;
- Feedback control under fading communication channels;
- Event-triggered control and filtering for multiagent systems;
- Security control of networked systems under data availability and integrity attacks.

About the Journal

Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

Editor-in-Chief

Prof. Dr. Kevin H. Knuth
Department of Physics, University at Albany, 1400 Washington Avenue, Albany, NY 12222, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, PubMed, PMC, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Physics, Multidisciplinary) / CiteScore - Q1 (Mathematical Physics)
