

Special Issue

Effects of Wildfire on Biodiversity

Message from the Guest Editors

Wildfire size and frequency is increasing across Earth's ecosystems, presenting us with a fire paradox. The goal of this Special Issue is to compile a set of scientific articles describing how wildfire has impacted diversity in the ecosystem where they occurred. We invite articles that present measured or modeled effects of wildfire on diversity across various scales and dimensions of fire regime metrics and biological taxa, including but not limited to:

- Effects of wildfire on diversity of any taxa in any ecosystem
- Relationships between fire effects and abiotic factors such as climate
- Predictions of changes in fire effects as a result of a changing climate
- Effects of scale in the interpretation of fire effects on biodiversity
- Consequences of larger burned area for the composition of communities and landscapes
- Consequences of wildfire on biogeochemistry, such as the global carbon cycle

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), AGRIS, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Forestry) / CiteScore - Q2 (Forestry)
