Pesticide and Veterinary Residues in Foodstuffs

Message from the Guest Editors

Human-synthesized pesticides/veterinary chemicals have been widely applied to field crops in agricultural production. The chemical residues derived from the parent compound and the metabolites or impurities of pesticides inevitably remain at trace levels in agricultural products, as well as in environmental matrices such as soil, water, and air. These residues can further be present in various foodstuffs and processed foods. Pesticide/veterinary residues have been monitored, managed, and registered through pre-marketing studies, field experiments, and market survey and enforcement. Recently, many scientific advances have been emerging in pesticide application, management, and control, including the development of state-of-the-art analytical methods, accumulative dietary risk assessments, food nutrients related to abiotic pesticide stress, residue control in field production, reduction of pesticide residues in food processing, and the mitigation of environmental contamination. The aim of this Special Issue is to collect original research papers and reviews focused on the above-mentioned and relevant areas.

About the Journal

Message from the Editor-in-Chief

Foods (ISSN 2304-8158) is an open access and peer reviewed scientific journal that publishes original articles, critical reviews, case reports, and short communications on food science. Articles are released monthly online, with unlimited free access. Currently, *Foods* has been indexed by the Science Citation Index Expanded (SCIE - Web of Science), PubMed, and Scopus. Our aim is to encourage scientists, researchers, and other food professionals to publish their experimental and theoretical results as much detail as possible. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global food science community.

Editor-in-Chief

Prof. Dr. Arun K. Bhunia

1. Department of Food Science, Purdue University, West Lafayette, IN, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, FSTA, AGRIS, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Food Science and Technology) / CiteScore - Q1 (Health Professions (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.3 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2024).
