The Potential of Biological Agents in Controlling Diseases, Pests, and Improving the Growth of Forest and Fruit Trees

Message from the Guest Editor

Due to the overuse of chemical pesticides over the past few decades, and their subsequent deleterious environmental consequences, the exploration of biological techniques for the management of tree diseases and pests is important. It is pivotal that future strategies of wood resource management incorporate the use of microbial agents and natural enemies to reduce the use of chemical protection products to mitigate emerging challenges. The microorganisms that are beneficial for tree growth and health are applied as biopesticides, microbial fertilizers, and biostimulants to control tree diseases and pests and to improve the wood yield and quality of forest products. In this Special Issue, all aspects related to the biological control of pests and diseases, integrated pest and disease management, and plant growth promotion of forest trees (including fruit trees, medicinal, and ornamental plants) will be considered. In addition, studies involving the use of microbes in soil management, phytohormones, and induced systemic resistance and stress tolerance of trees against biotic and abiotic factors in greenhouse and field experiments are welcome for submission.

About the Journal

Message from the Editorial Board

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Editors-in-Chief

Prof. Dr. Cate Macinnis-Ng

Department of Biological Sciences, Faculty of Science, University of Auckland, Private Bag 92019, Auckland 1142, New Zealand

Prof. Dr. Giacomo Alessandro Gerosa

Department of Mathematics and Physics, Catholic University of Brescia, I-25121 Brescia, Italy

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank:

JCR - Q1 (Forestry) / CiteScore - Q1 (Forestry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.9 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2024).
