

## Special Issue

# Advances in Vegetation Succession with Soil Erosion

### Message from the Guest Editors

Soil erosion can lead to the loss of soil resources and the destruction of land resources, which is an ecological stress that affects vegetation development and is affected by vegetation reactions. Its long-term effect changes the topography and soil characteristics and to some extent determines the development of vegetation. On the contrary, surface vegetation is also an important factor in reducing soil erosion. Therefore, the relationship between vegetation succession and soil erosion has attracted considerable attention due to its important scientific significance and practical application value. Potential topics include, but are not limited to, the following:

- Soil erosion and spatial distribution pattern of vegetation;
- Erosion-resistant plants and their community characteristics;
- Vegetation degradation mechanism and ecological restoration in soil erosion areas;
- Characteristics of vegetation community and its effect on soil and water conservation;
- Soil anti-scourability during vegetation succession;
- The effect of soil erosion on vegetation succession process;
- Vegetation community restoration succession and slope erosion sediment yield.

## About the Journal

### Message from the Editorial Board

*Forests* (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

#### Journal Rank:

JCR - Q1 (Forestry) / CiteScore - Q1 (Forestry)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.9 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2024).
