Dendrochemistry: Tools for Evaluating Variations in Past and Present Forest Environments

Message from the Guest Editor

Dendrochemistry, the measurement of inorganic elements in growth rings of trees followed by analysis and interpretation of changes in environmental chemistry through time, is both promising and challenging. For environmental situations where the abundance of an element or multiple elements has changed through time, direct monitoring of environmental chemistry might not extend very far back in time, if at all. Accordingly, estimating past element abundance of a site using trees is enticing. Even tree-ring records just 20 to 30 years in length, which would be considered short in traditional applications of dendrochronology, could be usefully long in dendrochemistry. Given that dendrochemistry truly works, it could be applicable in many environmental situations such as long-term changes in forest soil chemistry (e.g., N or P), abrupt changes in elements due to natural causes (e.g., ash deposits from explosive volcanic eruptions), or subtle increases in elements that might be harmful to human health (e.g., various metals) due to inadvertent contamination.

About the Journal

Message from the Editorial Board

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Editors-in-Chief

Prof. Dr. Cate Macinnis-Ng

Department of Biological Sciences, Faculty of Science, University of Auckland, Private Bag 92019, Auckland 1142, New Zealand

Prof. Dr. Giacomo Alessandro Gerosa

Department of Mathematics and Physics, Catholic University of Brescia, I-25121 Brescia, Italy

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank:

JCR - Q1 (Forestry) / CiteScore - Q1 (Forestry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.9 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2024).
