Special Issue

Metric Fixed Point Theory and Methods of Applications to Fractals and Fractional Equations

Message from the Guest Editor

In this Special Issue, we hope to publish articles on fixed point theory and applications in various distance spaces, such as metric space, b-metric space, quasimetric space, fuzzy metric space, and so on. We anticipate that these articles will include applications to fractional, differential, or integral equations. Additionally, it would be also preferable if the application included any aspect of fractal theory. Keywords

- fixed point
- complete metric space
- contraction mapping
- best proximity point
- iterated function system
- fractals
- fractional differential equation
- fractional derivatives
- existence theorems

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, and other databases.

Journal Rank:

JCR - Q1 (Mathematics, Interdisciplinary Applications) / CiteScore - Q1 (Analysis)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.9 days after submission; acceptance to publication is undertaken in 3.6 days (median values for papers published in this journal in the first half of 2024).
