

## Special Issue

# Theory and Applications of Web 3.0 in the Media Sector

### Message from the Guest Editors

In today's exploding Web landscape, where vast amounts of information (documents, images, audio, videos, etc.) are produced every day from various sources across the world, professional journalists often find it difficult to retrieve specific and detailed information or form a comprehensive view about a complicated topic. This occurs because, nowadays, most of the content today is published in an unregulated way and they have to navigate in a network of unstructured interconnected forms of data.. The solution to this problem can be given by the advancement of Web 3.0 or Semantic Web (SW). This special issue is soliciting theoretical and case study contributions, discussing and treating challenges, state-of-the-art, and solutions on Web 3.0 application in the media sector, including, but not limited to:

- Theory of Web 3.0 in relation with media organizations
- Application of Web 3.0 in the media sector
- Journalism 3.0 practices and procedures
- Semantically enhanced news validation and management
- etc.

---

## About the Journal

### Message from the Editor-in-Chief

*Future Internet* is a fast-growing journal devoted to rapid publications of the latest results in the general areas of computer networking/communications and information systems, with a focus on the Internet of Things, big data and augmented intelligence, smart systems (in terms of technologies, architectures, and applications), network virtualization, edge/fog computing, and cybersecurity. Both theoretical and experimental papers are welcome. Every year, *Future Internet* also features Special Issues dedicated to specific topics within the journal's scope.
