Internet of Things (IoT) Applications for Industry 4.0

Message from the Guest Editors

The rise of new digital technologies, known as Industry 4.0 (I4.0), is a transformation that allows gathering and analyzing data across machines, enabling faster, more flexible, and more efficient processes to produce higher-quality goods and services at reduced costs. I4.0 represents the fourth industrial revolution, and its genesis is due to the emergence of the Internet. With the fourth industrial revolution, Internet technologies aim at connecting all production means to enable their interaction in real time, thus providing communication among different players and connected objects thanks to technologies such as Cloud, Big Data Analytics, and the Internet of Things (IoT). The Industry 4.0 framework has had a huge impact not only on manufacturing per se, with the emerging concept of the smart factory, but also on many other aspects of daily life. However, this emerging framework, which is driven by the Industry 4.0 revolution, brings not only advantages, but also great challenges. For this reason, specific solutions must be designed, in order to cope with the typical issues related to the IoT.

About the Journal

Message from the Editor-in-Chief

Future Internet is a fast-growing journal devoted to rapid publications of the latest results in the general areas of computer networking/communications and information systems, with a focus on the Internet of Things, big data and augmented intelligence, smart systems (in terms of technologies, architectures, and applications), network virtualization, edge/fog computing, and cybersecurity. Both theoretical and experimental papers are welcome. Every year, *Future Internet* also features Special Issues dedicated to specific topics within the journal's scope.

Editor-in-Chief

Prof. Dr. Gianluigi Ferrari
Department of Engineering and Architecture, University of Parma,
Parco Area delle Scienze, 181/A, 43124 Parma, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), Ei Compendex, dblp, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Computer Science, Information Systems) /
CiteScore - Q1 (Computer Networks and Communications)
