

Special Issue

Gas Emissions from Combustion Sources

Message from the Guest Editors

Air pollutants are produced by multiple sources of both anthropogenic and natural origin. Among these sources, the one that often receives media attention is the combustion of fuels in stationary and non-stationary systems. The aim of this Special Issue is to collect original and review articles on all aspects of research on “Gas Emissions from Combustion Sources” with the purpose of identifying the most relevant sources of air pollution and investigating new solutions for a cleaner environment. The topics of this Special Issue include, but are not limited to:

- Emissions from internal combustion engines
- Emissions from stationary combustion systems
- Emissions from power generators
- Solutions for the optimization of combustion
- Solutions for the reductions of pollutants emissions from combustion sources
- Effects of COVID-19 and related lifestyle on gas emissions from combustion sources
- Spatial and temporal variations of emissions from combustion sources

Guest Editors

Dr. Cinzia Tornatore

Institute of Science and Technology for Sustainable Energy and Mobility (STEMS-CNR), Italian National Research Council, via Marconi, 4-80125 Napoli, Italy

Dr. Andrea De Filippo

Department of Chemical Engineering, University Federico II of Naples, 80138 Napoli, Italy

Deadline for manuscript submissions

30 June 2025

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, EBSCO, ProQuest and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25.8 days after submission; acceptance to publication is undertaken in 7.4 days (median values for papers published in this journal in the second half of 2024).
