

Special Issue

Application of Gel Technology in Food Industry and Environmental Engineering

Message from the Guest Editors

This special issue on the “Application of Gel Technology in Food Industry and Environmental Engineering” is dedicated to recent developments in the obtainment and characterization methods of different gels and the gelation mechanism of mixed or multicomponent gels for applications in food and environmental engineering fields. In recent years, interest in gel technology has increased due to state-of-the-art developments in various fields and the accessibility of advanced materials with various functionalities through inexpensive and environmentally viable processing methods. Gel technology has numerous environmental applications, such as catalysis, separation science... There are reported developments of a diverse range of chemical sensors derived from sol-gel processing technology for a wide range of applications. The multifunctional features of gels suggest that their applications in food and the environment has scope for further exploration. This Special Issue aims to highlight current and future findings in gel technology with translational potential across food industry and environmental engineering.

About the Journal

Message from the Editor-in-Chief

Gels (ISSN 2310-2861) is recently established international, open access journal on physical and chemical gel-based materials. The journal aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. General topics include but not limited to synthesis, characterization and applications of new organogels, hydrogels and ionic gels made either from low molecular weight compounds or polymers, composite and hybrid materials where a metal is by some means incorporated into the gel network, and computational studies of these materials in order to provide a better understanding of gelation mechanism. We cordially invite you to consider publishing with us and contribute with your own grain of sand to the advance in this fascinating field.

Editor-in-Chief

Prof. Dr. Esmail Jabbari

Biomimetic Materials and Tissue Engineering Laboratory, Department of Chemical Engineering, University of South Carolina, Columbia, SC 29208, USA

Author Benefits

High visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Polymer Science) / CiteScore - Q2 (Polymers and Plastics)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 10.9 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2024).
