Cryogelation and Cryogels 2.0

Message from the Guest Editor

Cryogelation, a polymerization process intended to form a crosslinked and macroporous gel network at sub-zero temperatures, has initially been used only for a handful of polymers since the 1970s. Gels produced with this process are known as freeze-thawed cryogels, or more commonly cryogels. More research is undergoing to expand the polymer library but also to better understand the underlying mechanisms of cryogelation.

Alternatively, a different class of cryogels, namely freeze-dried cryogels, are made from standard hydrogels that undergo a process of cryostructuration. Contributions covering the following topics from fundamental and application-driven perspectives are welcome and encouraged:

Cryogelation and freezing/thawing of both inorganic and organic precursors including biopolymers; Novel cryogenic processes such as flash freezing and freeze drying with non-aqueous solvents; Mechanisms of cryogelation and related processes; Cryogelation using unusual polymers; Applications of cryogels in material and life sciences.

About the Journal

Message from the Editor-in-Chief

Gels (ISSN 2310-2861) is recently established international, open access journal on physical and chemical gel-based materials. The journal aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. General topics include but not limited to synthesis, characterization and applications of new organogels, hydrogels and ionic gels made either from low molecular weight compounds or polymers, composite and hybrid materials where a metal is by some means incorporated into the gel network, and computational studies of these materials in order to provide a better understanding of gelation mechanism. We cordially invite you to consider publishing with us and contribute with your own grain of sand to the advance in this fascinating field.

Editor-in-Chief

Prof. Dr. Esmail Jabbari

Biomimetic Materials and Tissue Engineering Laboratory, Department of Chemical Engineering, University of South Carolina, Columbia, SC 29208, USA

Author Benefits

High visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Polymer Science) / CiteScore - Q2 (Polymers and Plastics)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 10.9 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2024).
