

# Special Issue

## Autoimmune Disease Genetics

### Message from the Guest Editors

Autoimmune diseases (ADs) are characterized by a multifactorial etiology, in which genetic and environmental factors are responsible for the loss of immunological tolerance. Knowledge of new aspects of ADs could help us to better understand disease etiology and treatment response and also contribute to the development of new therapies. The main objective of this Special Issue is to provide an update to the most important topics related to autoimmune disease genetics, with particular attention to organ-specific ones. In addition, we are interested in highlighting studies on comorbidities in ADs and their interrelations. Furthermore, we hope to carry out a comparison between researchers and clinicians with the aim of transferring the most recent innovations into daily practice, adopting shared lines of behavior, and, thus, strengthening the integration between these two groups.

## About the Journal

### Message from the Editor-in-Chief

Genes are central to our understanding of biology, and modern advances such as genomics and genome editing have maintained genetics as a vibrant, diverse and fastmoving field. There is a need for good quality, open access journals in this area, and the *Genes* team aims to provide expert manuscript handling, serious peer review, and rapid publication across the whole discipline of genetics. Starting in 2010, the journal is now well established and recognised.

Why not consider *Genes* for your next genetics paper?

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

#### Journal Rank:

JCR - Q2 (Genetics and Heredity) / CiteScore - Q2 (Genetics (clinical))
