Special Issue

Mapping of People and Places for Statistics

Message from the Guest Editors

This Special Issue of *Geographies* aims to examine the relationship between geography and statistics in light of the increasing need for up-to-date data with high resolutions in today's world. The ease with which geostatistical data can be produced necessitates a reflection on their reliability, accuracy, and validity. In this context, the added value that geography can provide to both official and non-official statistics through the production of georeferenced data becomes crucial. Statistical data are intimately linked to territorial units, and are referred to as points, lines, polygons, or surfaces. Geographical analyses, based on scale, resolution, and the extent of the areas studied, offer various opportunities for integrating statistical analyses.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Luca Salvati
Department of Economics and Law, University of Macerata, Via
Armaroli 43, I-62100 Macerata, Italy

Author Benefits

Open Access:
free for readers, with article processing charges (APC) paid
by authors or their institutions.

High Visibility:
indexed within ESCI (Web of Science), Scopus, AGRIS,
RePEc, and other databases.

Rapid Publication:
manuscripts are peer-reviewed and a first decision is
provided to authors approximately 23.5 days after
submission; acceptance to publication is undertaken in 5.7
days (median values for papers published in this journal in
the first half of 2024).
