

## Special Issue

# End of the COVID-19 Era: Models, Predictions and Projections

### Message from the Guest Editor

After two winters of COVID-19, in September 2022, an increase in cases has been recognized in data from the main countries in Western Europe. The situation in Africa or Asia is similar. The role played by new variants is also relevant. At the moment, we have no clear indications on the effect that these sub-variants will have on the disease severity. We introduce this Special Issue, the purpose of which is to highlight problems and solutions related to the analysis of this multifaceted situation, predicting its outcomes and responding to the question posed in the title. Needless to say, we are looking for approaches based on scientific methods, that have the right balance between observation, logical reasoning and mathematical modelling. Attention will be primarily paid to papers employing an experimental design and making use of data and statistics, aiming to achieve the construction and use of models suitable for predictions and projections on the future developments of the COVID-19 pandemic and its impact on health services.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), PubMed, PMC, and other databases.

#### Journal Rank:

JCR - Q2 (Health Care Sciences and Services) / CiteScore - Q2 (Leadership and Management)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.5 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2024).
