Effects of Prescribed Exercise and Physical Activity Interventions on Health Indices and Disease Improvement

Message from the Guest Editor

It is well known that exercise promotes physiological responses that benefit human health. However, studies that include interventions of exercise and physical activity on humans may not always agree in their findings, even when similar populations are involved. Therefore, robust outcomes are needed. A systematic review and meta-analysis method is an optimal vehicle to synthesize the evidence, to form firm conclusions putting them in perspective with the quality of the available evidence. The current Special Issue aims to accumulate the available evidence, to be used in practice and provide valuable information to improve human health.

About the Journal

Message from the Editor-in-Chief

Healthcare is an international, scientific, peer-reviewed, open access journal on health care systems, industry, technology, policy, and regulation, and is published semimonthly online by MDPI. Ocular Wellness & Nutrition Society (OWNS) is affiliated with *Healthcare* and its members receive discounts on article processing charges.

Author Benefits

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), PubMed, PMC, and other databases.

Journal Rank:

JCR - Q2 (Health Care Sciences and Services) / CiteScore - Q2 (Leadership and Management)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.3 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2024).
