

Special Issue

Artificial Intelligence (AI) and Machine Learning (ML) in Medical Imaging Informatics towards Diagnostic Decision Making

Message from the Guest Editor

This Special Issue (SI), invites manuscripts (research, review, and case studies) on AI and ML (especially DL techniques) based ongoing progress and related development in medical imaging informatics to influence human health and healthcare systems through diagnostic decision making process. The SI will cover topics across the spectrum of medical imaging informatics by considering the breadth of imaging modalities (e.g., optical, molecular, in addition to traditional diagnostic modalities) and the diversity of specialties that depend on imaging information (e.g., radiology, dermatology, pathology, surgery, etc.). Research areas may include (but not limited to) the following:

- AI/ML-based classification, object (concept) detection in medical imaging;
- Pattern recognition and reasoning for the specific disease in medical imaging;
- AI/ML based disease detection and diagnosis;
- ML/DL in radiology;
- Skin cancer diagnosis in dermoscopic images;
- AI/ML in Oncology;

About the Journal

Message from the Editor-in-Chief

Healthcare is an international, scientific, peer-reviewed, open access journal on health care systems, industry, technology, policy, and regulation, and is published semimonthly online by MDPI. Ocular Wellness & Nutrition Society (OWNS) is affiliated with *Healthcare* and its members receive discounts on article processing charges.

Author Benefits

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), PubMed, PMC, and other databases.

Journal Rank:

JCR - Q2 (Health Care Sciences and Services) / CiteScore - Q2 (Leadership and Management)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.5 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2024).
