

## Special Issue

# Family Influences on Child and Adolescent Health

### Message from the Guest Editors

In this Special Issue, child and adolescent health is broadly referred to as the cognitive, mental, educational, behavioral and physical aspects of child and adolescent development that bear positive implications for their well-being. It is theoretically and empirically pivotal to scrutinize the ways in which families and specific processes and interactions with other social systems affect the health development of children and adolescents, which is in fact related to the rudimental foundation for the continuity of mankind. This Special Issue welcomes high-quality contributions addressing the health issues of children and adolescents related to the family and their social systems, and potential topics include, but are not limited to:

- Family, children and adolescents;
- Family socialization;
- Family and related social systems;
- Childhood and adolescence;
- Cognitive and mental issues;
- Educational and behavioral development;
- Emotional and physical health;
- Parent-child relationships;
- Child and adolescent development;
- Social participation and support;
- Wellbeing.
