What Did the COVID-19 Pandemic Teach Us About Health Literacy and Health Communication?

Message from the Guest Editors

The COVID-19 pandemic has been a test of everything we know in public health and healthcare delivery. Countless public health scientists, healthcare providers, and health communicators can be credited with saving millions of lives. However, we also lost too many. How can we do a better job moving forward? Were you able to apply evidence-based/best practices in health literacy and/or culturally sensitive health communication during the COVID-19 pandemic? A good case study— what worked and what did not—is welcome. Manuscripts describing translational research, dissemination, implementation, and/or evaluation are especially encouraged.
