Special Issue

Policy Interventions to Promote Health and Prevent Disease

Message from the Guest Editor

Policymaking in the healthcare and public health domains depends on policy development at various levels—governmental, institutional, and professional. *Healthcare* announces a call for papers dealing with policy interventions aimed at promoting health and ameliorating disease. Submitted papers are expected to address the importance not just of medical and public health actions, which can be offered by single practitioners to single patients and families, but of policy as it pertains to multiple persons, groups, and populations.
