

Special Issue

Grafting to Improve Yield and Quality of Vegetable Crops

Message from the Guest Editor

Grafting, as the vascular connection of two living tissues coming from different plant species and genotypes, allows the combination of desirable traits present on different plant species or genotypes into a single plant. The use of rootstock has the potential to improve traits on elite scions, such as growth, development, and fruit yield and quality. Selected rootstocks can also improve crop tolerance to soil-borne pathogens and abiotic stresses, consequently reducing crop losses and the need for external inputs. Finally, crop efficiency can be increased by combining different crop species in order to harvest more than one final product from the same plant, for instance, by grafting tomato into potato plants. This special issue focuses on the use of innovative rootstock genotypes and the most recent progress on vegetable grafting techniques. Original research papers, communications and review articles are welcome.

About the Journal

Message from the Editor-in-Chief

Horticultural plants and their products provide sustenance, health, and beauty. A confluence of factors is putting increasing pressure on horticultural production to evolve, and innovative research is addressing these challenges. *Horticulturae* provides a venue to communicate research results in a rapid manner with open access, allowing everyone the opportunity to stay abreast of leading research addressing horticulture. I invite you to consider publishing the results of your research in this high quality, peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Luigi De Bellis

Department of Biological and Environmental Sciences and Technologies, Università del Salento, Centro Ecotekne, via Provinciale Lecce Monteroni, 73100 Lecce, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, FSTA, and other databases.

Journal Rank:

JCR - Q1 (Horticulture) / CiteScore - Q2 (Horticulture)
