

## Special Issue

# Mathematical Modelling of Infectious Diseases

### Message from the Guest Editors

The COVID-19 pandemic has reinvigorated interest in using mathematical models by the infectious disease community. The potential for mathematical modeling is tremendous. However, it is challenging to build analytically tractable models that accurately describe disease dynamics that can be easily validated using publicly available datasets. In this Special Issue, we aim to compile a collection of papers focusing on novel studies based on mathematical models to understand the transmission process's complexity, such as the multiple strain pathogen, vaccination, and others.

---

### Guest Editors

Dr. Pierre Magal

Dr. Jozsef Z. Farkas

Prof. Dr. Glenn Webb

## About the Journal

### Message from the Editor-in-Chief

---

#### Editor-in-Chief

Dr. Nicola Petrosillo  
Infection Prevention & Control and Infectious Disease Unit, University  
Hospital "Campus Bio-Medico", 00128 Rome, Italy

---

#### Author Benefits

##### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

##### High Visibility:

indexed within Scopus, ESCI (Web of Science), PubMed, PMC, Embase, and other databases.

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 32.6 days after submission; acceptance to publication is undertaken in 3.9 days (median values for papers published in this journal in the first half of 2024).
