Child Mental Health in a Modern World

Message from the Guest Editor

Over many years, there have been various twists and turns in the development of child mental health services and the interventions they provide. In recent times, there has been a tendency for formal child mental health services to focus more around severe and enduring mental illness, which begins to mirror adult mental health services. This takes the focus away from prevention. More importantly, many child mental health interventions that are being researched or implemented have been used in adult mental health services. Is it time for a fundamental rethink about how we develop interventions for child and adolescent mental health, working much more closely with children, young people and their families to understand their needs and developing our own child-friendly, child-oriented interventions? There are a number of child mental health challenges facing young people internationally in the modern world. These include the pressures created by changes in societies across the globe, a world pandemic, rapid technological advances, poverty, disease and inequalities.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.
