

## Special Issue

# Developments in Long-Term Care for Older People between Residential and Community-Based Services

### Message from the Guest Editors

Population ageing is a worldwide phenomenon, and the safeguard of the health and wellbeing of the increasing number of seniors has become one of main issues on political agendas. If family help is not available, personal care assistants or home care services are essential, and when these are not feasible or sufficient, moving into a nursing home becomes the most common alternative. Moreover, older people with physical and cognitive limitations strongly require integrated health and social care services. Long-term care issues of ageing people represent, therefore, crucial challenges for policy makers and care professionals, especially in light of the impact of the COVID-19 pandemic. A possible source of help could come from Information and Communication Technologies (ICTs), as these may facilitate care and cure at a distance. On the background of these considerations, this Special Issue welcomes contributions reporting both qualitative and quantitative (or mixed) studies, addressing formal care for older people in a multidisciplinary perspective and, particularly, if they offer a comparative/cross-country perspective, without excluding insights at local and national levels.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
