

Special Issue

Advances in the Conceptualization and Study of Environmental Exposures in Relation to Occupational Health

Message from the Guest Editor

This Special Issue will highlight recent advances in controlling occupational exposures and promoting occupational health and safety. Contributions examining exposures in the work environment using newer methods (e.g., Bayesian model averaging) or instruments (e.g., wearable sensors) as well as studies involving newer conceptualizations of the work environment (e.g., remote work) and workplace hazards (e.g., poor safety culture) are encouraged. Manuscripts presenting novel interventions targeting these exposures or addressing vulnerable populations are also welcome. Submissions may include studies using quantitative, qualitative, or mixed methods with primary or secondary data. All manuscripts will be subject to peer review to ensure quality publications. For more information, please contact Kevin Kelly (kevin-kelly@uiowa.edu).

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Editor-in-Chief
