

## Special Issue

# Risks to Human Health Caused by Exposure to Wastewater Contaminated with Metals and Microplastics

### Message from the Guest Editor

Water, as a vital resource for maintaining life, is essential in maintaining the homeostasis of organisms. The quality of this resource is essential to public health and the survival of organisms. We will address several types of problems related to water contamination, such as waterborne infections, diarrhea, vomiting, hepatitis, leptospirosis, and contamination of the trophic chain by heavy metals, among others. Furthermore, we must take into consideration studies that demonstrate the synergistic processes of contaminating agents. Chronic exposure to contaminated water can result in severe public health problems.

### Guest Editor

Prof. Dr. Paulo Henrique Rocha Aride

Morphophysiology Laboratory, Federal Institute of Education, Science and Technology of Amazonas-IFAM, Manaus 69020-120, Brazil

### Deadline for manuscript submissions

31 July 2025

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
