Health and Wellbeing on Aging

Message from the Guest Editors

The worldwide aging of the population is a reality in this century. The increase in the average life expectancy of the populations is undoubtedly one of the main challenges achieved. However, a new challenge arises—that is, to ensure that the increase in years of life corresponds to years of health and quality of life. We welcome contributions based on interventions to improve older people's health and wellbeing, and we hope to receive manuscripts from a broad spectrum of geographical, cultural, and economic settings, which may include original research, review articles, case series, and opinion papers. I would like to invite the submission of manuscripts covering in both qualitative and quantitative research across the following areas: - Polymedication in older patients; - Risk management and safety of medicines in older patients; - Active aging; - Physical activity and ageing; - eHealth and the elderly; - Sustainability of aging populations; - Health Services Policies for older people; - Support systems care for use by older people; - Pharmaceutical care.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.
