Inflammatory Diseases and Its Impact on Quality of Life

Message from the Guest Editors

The term immune-mediated inflammatory diseases covers a wide range of pathologies that can affect different apparatus and systems of the body such as the joints, the intestinal tract or the skin and appendages, among others. They are characterized by a chronic course with possible flare-ups. In recent decades, a revolution has taken place in their treatment with the appearance of biological drugs and other small molecules. In spite of this, in many cases, control of the disease is only partial. In this group of pathologies, evaluating the effectiveness of the treatment through its impact on the quality of life is fundamental. The impact of the disease varies according to personal characteristics and the environment of the individual. Identifying factors related to a better or worse quality of life, the effect of different treatments or evaluating the quality of life in the social environment of patients are issues of great importance. For these reasons, we are promoting this Special Issue focused on quality of life in inflammatory diseases with the aim of deepening, promoting, and strengthening research in this area of knowledge.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.
