

Special Issue

Research on Lifestyle, Nutrition, Consumer Behavior and Family Health

Message from the Guest Editors

A family is considered as the basic unit of health production at the individual and societal level, a context in public health practice, and an essential part of public health policy, research, and teaching. Recent studies have indicated a growing list of determinants of health, as they are associated with education, employment, income, family, living environment, nutrition, as well as other social determinants, such as early life, stress, social exclusion, social support, addiction, health system, gender, culture and social norms, media, stigma, and discrimination. Within the important determinants of health, there are purchase decisions and consumer behaviors, defined by the American Marketing Association as the dynamic interaction of affect and cognition, behavior, and the environment by which human beings conduct the exchange aspects of their lives. In the last few months, as the world has been experiencing the COVID-19 global pandemic, we have observed the dynamic changes of individual and global priorities. In this Special Issue of IJERPH, we would like to give readers valuable insights into associations between lifestyle, nutrition, consumer behavior, and family health.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.
