Digital Technology for Disease Treatment

Message from the Guest Editor

The World Health Organization has declared that digital health technologies provide concrete opportunities for addressing health system challenges and thereby improving health services. For example, digital health technologies can be used to facilitate personalized medicine and provide support to patients in need. Even though the innovative role that digital health technologies can play in strengthening the health system is widely recognized, there is an equally important need to evaluate their contributing effects. We invite papers addressing these topics, especially those that combine a high academic standard with a practical focus on providing real-life solutions.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.
