

Special Issue

New Technologies, Rehabilitation and Health

Message from the Guest Editors

The rapid progress of today's society in the management of different pathologies and their derived consequences has produced a change of paradigm in health care and disease. Similarly, different current situations of global impact have driven the rapid growth of the use of emerging technologies in the prevention, promotion, evaluation, and treatment of population health and clinical care. These emerging technologies; medical devices; mobile and web applications; and computer engineering, individual electronic assessment, and treatment devices have been postulated as useful and effective tools in the management of a wide range of pathologies. Therefore, the aim of this Special Issue is to explore new tools for addressing health and disease, through the design and evaluation of health innovations and emerging technologies.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
