Universal Health Coverage in Sub-Saharan Africa: Progress, Challenges, and Prospects

Message from the Guest Editor

We are organizing a Special Issue focusing on universal health coverage (UHC) in Sub-Saharan Africa in the *International Journal of Environmental Research and Public Health* (IJERPH). This Special Issue focuses on three main areas: progress made over the past three years (2016–2018, may include first half of 2019) by Sub-Saharan African countries towards UHC; challenges faced in achieving UHC; and prospects of achieving UHC by 2030. The World Health Organization (WHO) defines UHC as a state where all individuals and communities receive the health services they need, without suffering financial hardship. UHC covers the full continuum of care from health promotion to disease prevention, treatment, rehabilitation, and palliative care. In this Special Issue, we shall consider any article dealing with UHC, but will have special focus on the following three thematic areas:

- Progress towards universal health coverage;
- Challenges towards universal health coverage; and
- Prospects towards universal health coverage by 2030.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
