Implementation of the Up-to-Date Physiotherapy into the Health Care System

Message from the Guest Editor

It is my pleasure and honor to announce the Special Issue titled “Implementation of Up-to-Date Physiotherapy in the Health Care System.” The development of the field of physiotherapy in recent years has been very noticeable—new techniques and new methods of applications have been introduced into therapy. Hence, the idea of the proposed Special Issue is to collect the most updated knowledge about the use and effectiveness of physiotherapy in various areas of medicine. I encourage the scientific community from all over the world to publish, in open access form, both original papers and high-quality reviews that raise the topic of up-to-date physiotherapy. This Special Issue might also be a place to share your own experiences and challenges in developing strategies to bring physiotherapy “closer to the patient” in the health care system, since early contact with physiotherapists has been confirmed to lead to advantages for patients. I am convinced that this Special Issue, supported by prominent scholars, will have a significant impact both on the scientific community and on physiotherapy practitioners.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.
