

## Special Issue

# Health Disparities in Urban Areas

### Message from the Guest Editor

There is substantial evidence in the public health literature to demonstrate that place, where one lives, works, plays and prays, impacts health information access and health outcomes. Demographic characteristics of urban centers are changing and these changes can impact the social determinants of health, but in some cases not all population subgroups are impacted equally. Health disparity research has several phases, each phase asks different types of questions. Phase 1—detection—determine if disparities exist. Phase 2—understanding—determines root causes of health disparities. Phase 3—solutions is focused on developing, testing and implementation of potential solutions to address health disparities. We already have a vast amount of literature on the detection phase and it is necessary to focus our efforts on understanding the root causes and developing sustainable solutions that address modifiable risk factors.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
