Mental Health at the Workplace

Message from the Guest Editor

Mental health problems are a major concern as they are widely prevalent and involve high economic costs. We see a tremendous reduction in quality of life stemming from mental ill-health, and a related increase in workability problems and disability claims has been observed in most Western countries. The workplace has been examined as a potential source of stress-related ill health, while it also provides a useful setting for primary and secondary prevention of mental health problems. Several strategies have shown promising results when it comes to tackling mental health problems at the workplace. On the other hand, there is a lot of heterogeneity in the methodological quality of studies and mixed findings have been observed. Additionally, the factors that contribute to the successful implementation of an intervention remain unclear.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.
