New Perspectives in Nicotine Use

Message from the Guest Editors

Tobacco in any form kills millions of people every year. Cigarette smoking causes 8 million deaths worldwide every year, of which 7 million related to active smoking and 1.2 million to passive smoking. In recent years, alternative forms of nicotine delivery, such as electronic cigarettes (e-cigarettes) and heated tobacco, have gained popularity, especially among young adults. It is estimated that 2% of EU citizens regularly use e-cigarettes.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.
