Pro-environmental Behaviors, Intentions and Concerns during, before and after the Pandemics: Present and Future Challenges

Message from the Guest Editors

In the last two years, the sudden and severe changes triggered by the pandemic have overwhelmed societies around the world, leaving us wondering: How has this event affected our awareness of the environmental crisis? Has it been moved to the background or become even more evident? In particular, what repercussions has the pandemic had on people's pro-environmental behaviors, intentions and attitudes? This Special Issue will trace the effects of the pandemic on society's concern for the environmental crisis, with the goal of understanding how such a devastating event for human health may have influenced individuals' view of environmental issues and how this relates to their pro-environmental intentions and behaviors in everyday life. We are therefore inviting the submission of research results concerning classic attitude-behavior models in the context of pro-environmental behaviors before and / or during the pandemic in various ecologically relevant areas (from mobility to waste management, from energy use to consumption, from tourism to work environments, and more).

Guest Editors

Dr. Paola Passafaro

Dr. Barbara Barbieri

Dr. Elena Bocci

Dr. Claudia Chiarolanza

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.
