Special Issue

Advances in Technology Enabled Health and Care

Message from the Guest Editor

Technology is providing exciting opportunities to significantly improve the quality of care and quality of life for people-older people, those with long term conditions, people with physical and mental health concerns, children and families, and carers can, and do. all benefit from access to technology enabled care. It enables personalised, outcomes focussed approaches that support personal choice and control, giving patients and their carers both information and options and improving their connections with clinicians and other care professionals. This Special Issue is calling for papers that explore any aspect of technology enabled care from innovation including new service models, the area of health technology assessment, the opportunities that "next generation" technologies may bring, through to the exploration of the deployment and scaling up of digital services.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decisionmaking toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.
