

Special Issue

Workplace Health, Wellbeing and Productivity

Message from the Guest Editors

The evidence of a link between workplace health and wellbeing and indicators of organizational performance is robust and reliable. There is also considerable evidence of strong relationships between indicators of health, wellbeing and employee engagement. However, with questions over the strength of the evidence that workplace health and wellbeing interventions cause better health and wellbeing, there are also questions over whether the actions taken by organizations to improve health and wellbeing will also address organizational and societal concerns around productivity and performance. The purpose of this Special Issue is to further explore the links between workplace health, wellbeing and productivity, and to examine how organizations may act to achieve the twin aims of better worker health and higher productivity. We take broad definitions of productivity and performance that include not just financial performance, but also issues related to worker motivation, absenteeism and presenteeism, for example.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation,
