Unlocking the Power of Geospatial Data: Semantic Information Extraction, Ontology Engineering, and Deep Learning for Knowledge Discovery

Message from the Guest Editors

Over recent years, there has been a tremendous increase in digital information resources, including a significant amount of semi-structured data, such as XML files and metadata records, as well as unstructured data, such as scientific reports, news articles, social media, and historical archives. These data include a wealth of information about places, events, phenomena, geospatial concepts, and relations. Semantic information extraction aims to make this information explicit, enabling computer systems to make sense of the content and facilitate knowledge discovery and organization. Semantic analysis and visualization approaches play a significant role in further discovering immanent aspects of these data. Lately, deep learning algorithms have been used to automatically extract patterns and relationships from large amounts of data, including unstructured and semi-structured data. By combining deep learning approaches with semantic web techniques, such as ontologies and linked data, more powerful and effective intelligent systems can be developed that can reason over large-scale knowledge bases and perform complex tasks.

About the Journal

Message from the Editor-in-Chief

The *ISPRS International Journal of Geo-Information* invites you to submit research articles, reviews, and reports covering topics of the whole domain of geo-information. Although the journal was only founded in 2012, it has already achieved wide recognition in the scientific community. We are proud that since April 2015, our journal is indexed by the SCIE of the Web of Science. As Editor-in-Chief, I encourage you to consider *IJGI* for your scientific papers and would be pleased to welcome you as authors.

Editor-in-Chief

Prof. Dr. Wolfgang Kainz
Cartography and Geographic Information Science, Department of
Geography and Regional Research, University of Vienna,
Universitätsstr. 7, A-1010 Vienna, Austria

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), GeoRef, PubAg, dblp, Astrophysics Data System, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Remote Sensing) / CiteScore - Q1 (Geography, Planning and Development)
